In fact, according to the CDC, "The percentage of adults aged 40 and older taking drugs that combat high cholesterol rose from 20 percent to 28 percent between 2003 and 2012." Currently, it's estimated that 93% of the adults currently taking cholesterol lowering medications are using a statin. Despite risks of certain medications, such as Crestor, Medical experts continue to argue that statin therapy is one of the most effective, highly-valuable, preventative treatment options available, and statins continue to present an opportunity to further reduce death and disability due to heart disease and stroke.
